In 2020 Poland as the majority of world economies has been put to the test by the pandemic. After facing the COVID19 crush test we are seeking new, resistant models for the future economy.

Pandemic and climate changes are global challenges, which requires responses on European and global level. There is no way back to the old "normal", there is a chance to enter the green way towards the better, green future. How to get there?

We, as the community of people coming from Polish and Nordic businesses want to support and actively participate in this process. Our new project ON THE GREEN WAY is our response.
